

ADRIÁN DOMÍNGUEZ CASASOLA

Fullstack Engineer

Mexico City, Mexico adriandomc@gmail.com Portfolio +52 55 3254 7332 GitHub LinkedIn

SUMMARY

Software engineer with around five years of experience building web applications from scratch. I specialize in frontend development, combining strong UI fundamentals with full-stack execution, product ownership, and direct user feedback.

SKILLS

Frontend TypeScript React Web Components Svelte Lit Design systems

Backend Node.js Ruby on Rails REST APIs MongoDB PostgreSQL Docker Coolify

EXPERIENCE

Co-founder / Engineering Lead February 2026 - Present

VoltAlfa Corporation · Mexico City

- Lead a small engineering team to design, build, and ship ZapaPOS, a local-first, multi-tenant point-of-sale application for desktop and mobile.
- Translate real inventory, sales, purchasing, reporting, and staff workflows into product decisions, interfaces, data models, and production features using TypeScript, Meteor, Svelte, and MongoDB.
- Built an internal developer-tools platform with SvelteKit and TypeScript, integrating self-hosted applications behind unified authentication with Authentik.

Software Solutions Developer August 2025 - Present

BBVA Mexico · Mexico City

Develop scalable Web Components for a corporate leasing platform; collaborate on product and roadmap decisions; and lead automated, exploratory, regression, and end-to-end testing for multidisciplinary teams.

Full-stack Developer October 2024 - August 2025

WAAK Technologies · Mexico City

Developed multi-tenant platforms for construction, transportation, and logistics, integrating external services for data visualizations, dynamic reports, real-time tracking, and production troubleshooting.

Front-end Developer September 2021 - October 2024

Freelancer · Remote

Built and maintained web applications with React, Svelte, Astro, PHP, and Node.js, improving performance, accessibility, and user experience across production deployments.

PROJECTS

ZapaPOS TypeScript Meteor Svelte MongoDB 

A 0-to-1 local-first, multi-tenant POS designed and shipped for desktop and mobile retail operations.

- Took the product from customer discovery through implementation, testing, deployment, and continuous iteration.

Qastor TypeScript Desktop Testing 

Open-source desktop application for creating test suites and collecting screenshots and debug logs.

Markal Lit TypeScript Astro WebRTC 

Open-source, local-first collaborative calendar built around peer-to-peer synchronization.

EDUCATION

Universidad Autónoma Metropolitana 2019 - 2024

Physics Engineering studies & coursework in Instrumentation and Equipment
